WE HAVE A SOLUTION TO PROTECT YOUR HEALTH, HOME, AND ENVIRONMENT.

What exactly are we talking about?

Freije Easy Water is a water treatment technology that uses electronic frequencies to change the shape and charge of the minerals in your water, which prevents scale build-up. Easy Water protects your water heater, piping, and other household water appliances. Easy Water naturally takes place of a salt type softener.

Easy Water vs. Water Softener

Water softeners trade calcium and magnesium for usually, sodium. This is a process known as ion exchange. During this process, the minerals in your water are replaced with sodium, which in turn may raise your blood pressure. Easy Water is a water conditioning system that changes the minerals in water to prevent them from forming scale.

How does this water conditioning system save MONEY?

Easy Water removes lime scale from the inside of your water heater which will use less energy to heat your water. Easy Water will protect your appliances from lime scale and extend the life expectancy, reducing the replacement rate of your appliances. **Easy Water will save you \$60 to \$180 a year on salt.**

Cost?

To install the Easy Water 1100 is \$1,384.17 (Member Rate). If you mention this ad you will receive an additional **\$28.00 OFF (Not Valid With Any Other Coupon)**, so please call us today for more information or to schedule the installation of your Easy Water unit and start saving money today.
